Art Unit: 1617

Claims 1-17 are pending in this application.

Applicant's claims are drawn to a fertilizer product comprising an agrochemical (e.g., prodiamine, claim 6), and an organic liquid carrier (e.g., N-methyl pyrrolidone or NMP, or  $\gamma$ -butyrolactone, claims 3-4).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combined teachings of Narayanan et al (US 5,354,726), Douglass et al (US Publication 2005/0043182), and Tijsma et al (US 6,656,882).

Narayanan et al teach the utility of combining agricultural chemicals such as prodiamine (col 12, line 39) with solvents including N-methylpyrrolidone (Table II, example 2; Table IV, example 21).

Douglass et al teach agrochemical compositions comprising microemulsifiable agrochemical compositions with water-miscible solvents such as  $\gamma$ -butyrolactone and N-methyl-2-pyrrolidone (para 22). Prodiamine is disclosed as a useful herbicide (para 48).

Tijsma et al teach controlled release particulate fertilizer compositions comprising a particulate fertilizer core surrounded by a controlled release layer containing a herbicidal component (col 7) and pyrrolidone or lactone polymeric materials (col 8, lines 38-49).

Art Unit: 1617

One of ordinary skill in the art would be motivated to combine these references in order to make use of the active agents of Narayanan et al or Douglass et al in the particulate fertilizer compositions of Tijsma et al.

Thus it would have been *prima facie* obvious to the ordinary artisan at the time the invention was made to have combined a lactone or a pyrrolidone carrier with a herbicidal component such as prodiamine because lactones and pyrrolidones were known carriers in fertilizer based agrochemical compositions.

No unobvious or unexpected results are noted; no claim is allowed.
